

Offering extraordinary luxury and personal refinement, the Infiniti EX is designed to make every drive invigorating. And it's loaded with excellent features as well.

Designed around the 297-hp version of the award-winning VQ V6 engine, the EX's Intelligent All-Wheel Drive brings the crossover a true dynamic driving experience by delivering responsiveness as well as control. It actively adjusts based on driving conditions to give all-wheel-drive traction when you need it and rear-wheel-drive handling response when you don't.

Inspired by high-performance sports cars, the EX's Front Midship (FM) platform centers the vehicle's weight to help deliver quick steering response and precise balance through curves. Superior turning radius and independent suspension help intensify the connection between driver and road.

And the interior's exceptional as well. Black lacquer, aluminum, available maple wood and supple leathers add natural warmth and refined elegance to the interior. An array of colour and texture combinations allow for precisely tailoring the EX to personal taste.

Upon approaching the EX, it senses your Intelligent Key and responds with the radiant glow of eight sequenced exterior and interior lights. Inside, its driver's seat, steering wheel and outside mirror positions respond simultaneously to your adjustments with the available synchronization function. The tilt and telescoping steering wheel (with optional power) help provide maximum comfort and visibility.

To easily accommodate seating and cargo needs, the 60/40 power folding 2nd-row seats fold flat at the push of a button. Another press powers the seats back to their upright position. Both front seats offer available power heating, and the driver's seat has an available Driver's Memory function that automatically adjusts the seat to preferred settings.

## Style Meets Performance

With great design comes great vision, along with new levels of confidence and convenience. The Infiniti-first Around View Monitor uses cameras on every side to see objects or vehicles around you. It then presents the surrounding environment in a composite bird's eye perspective on the central screen.

Available Lane Departure Prevention helps keep the EX from unintentionally drifting from its lane by utilizing sensors that monitor the distance between vehicle and lane markings. When your vehicle drifts unintentionally towards the lane markers, the system first sounds an audible warning, then lightly applies selected brakes to help ease your vehicle back into its lane.

Other nice touches include the available 9.3 GB Music Box hard drive, which allows you to rip up to 2,900 songs, then store and catalogue them for easy access. A compact flash card can also be inserted into the dash slot to listen to playlists from home. Or simply enjoy the standard XM® Satellite Radio.

The available touch-screen Infiniti Hard Drive Navigation System features XM NavTraffic® with Real-Time Traffic Information to monitor traffic flow, accidents and road closures, helping you avoid traffic and optimize your drive time. Lane Guidance also shows which lane to be in when approaching a highway interchange or exit, and 3-D

building graphics give a clear image of where you are and want to go. All these features can easily be controlled through the touch-screen, the Infiniti Voice Recognition system or the centralized Infiniti Controller.

If you're dying to hit the road in the INFINITI EX, a test drive is a must!

Shot on Location at Birchwood INFINITI at 3965 Portage Avenue.
